

Welcome to the Gabriel Method

Case Study Action Steps

Lesson No. 5

Get Fit-GM Style

Action Steps

- Listen to Your Get Thin or Get Eaten Visualization
- Try 10 minutes of Get Thin or Get Eaten exercises, 2-3 times per week

Ongoing Steps

- Speak with your Gabriel Method coach
- Do evening visualization each night before bed
- Do morning visualization suggested by coach
- Take morning probiotic supplement
- Continue frequent water consumption
- Take morning Gabriel Method greens
- Eat a great Gabriel Method blood sugar balancing breakfast
- Have Gabriel Method greens or blood sugar balancing snack in afternoon

Activity and FAT Programs

When your FAT Programs are on, you feel...

- Tired (slow metabolism)
- Opposed to exercise
- Over stressed or over worked

NOTE: Exercising can be damaging if it increases your stress load

Welcome to Month Five

You Should Experience:

- More energy
- A spring in your step
- Reduced stress

You know your FAT Programs
are turning off when the
concept of being physically
active becomes appealing...

GM Exercise 101

- Focus on exercising the right way
- Exercise as a calorie-burning tool doesn't work
- We exercise to get your body to want to be thin
- When done correctly, your body will shift its set point, get thinner automatically, and lose weight easily and almost effortlessly

The “Get Thin” Programs

- “Get Thin or Get Eaten Adaptation”
- Thousands of years ago when we lived outdoors, fat was a form of protection

Naturally Thin

- In places where it wasn't cold and there was plenty to eat, your body had no need or desire to hold onto extra weight
- The stress of being in a famine wouldn't be there, so your FAT Programs would be turned off

Stress for Weight Loss

- If there were tigers that ran after everyone in the village and you weren't lightening fast, you were dead
- That experience is also a stress
- But it causes different chemistry in your body
- It activates your thin programs, or the "Get Thin Or Get Eaten Adaptation"

When You Have This Stress

- Your body becomes very efficient at burning fat
- Your metabolism speeds up
- You're not that hungry
- You crave healthier foods
- You experience natural weight loss without restriction or suffering

Get Thin or Get Eaten Stresses

- Now it's time to impose the Get Thin Or Get Eaten stresses (aka exercise)
- NOTE: You don't have to do them that often or even that much
- As little as 30 or 40 seconds can have a huge impact on your internal chemistry

Sample Exercise #1

- Walk for 10 - 20 minutes
- Then, for just 10 seconds, move as fast as you possibly can (be careful!)
- Imagine you're being chased by a predator
- Your body doesn't know the difference between a real and an imagined experience so use that to your advantage

Visualization and Exercise

“Olympic athletes tested visualizing their ideal performance in their sport fired in the same coordinated sequence of neurons and muscles as if they were actually doing the sport.”

The Dog Chase...

“I’m standing up, my heart’s pounding, I’m sprinting as fast as I can... and I dropped weight like you couldn’t believe. And then I realized why...”

Primal Response

- Real life predator scenario created a primal response that made my body want to be thin
- I would sprint as fast as I could and I'd imagine this dog was chasing me again
- This simple exercise took my weight loss to the next level

How Often Should I Exercise?

- 2 - 3 times a week to start
- Start with 10 minutes

Olympic Sprinters

- They sprint for as short as 10 seconds at a time
- They don't have an ounce of excess fat on them
- Long-distance runners have more body fat than sprinters

Too Much GTGE Exercise

- Turns a good stress into a bad stress
- Stress overload in your body
- Becomes a chronic stress

Acute Stress

- Really sharp and intense
- It will be intense only if you rest in between
- If you exercise every day, it won't be intense and you will over-train

Over Training

- Causes a chronic elevation in your cortisol levels
- Triggers a famine response which activates your FAT Programs

How I Got Started

1. Stationary bike warm-up for 5 minutes
2. Intensity exercise for 10 seconds on and off
3. Cool down
4. Upper body strength training – 5 minutes

Upper Body Strength Training

- Your muscle cells will become more sensitive to insulin
- Helps to wring out the stored sugar within the muscles
- Muscles want to suck up more sugar, so they become more sensitive to insulin

Sample Workout #2

- Cycle for 20 minutes
- 5 minutes of sprinting, 10 seconds at a time
- Push-ups and pull-ups

More “Play” Exercises

- Park with children
- Running with pets
- Team sports: soccer, basketball
- Martial arts: boxing, kickboxing
- Martial arts help you become more relaxed in confrontational situations

High Adrenaline Sports

- Anything that thrills, excites or makes you nervous
- Skydiving, bungee cord jumping, mountain climbing, hot air ballooning
- Motocross, kayaking, surfing
- Ultimate Frisbee

After Exercise

- You should not be exhausted, starving, craving junk food, or overeating
- You want to feel calm and centered, with blood flowing throughout your body
- Sitting up straight
- Muscles toned
- Feeling good

Morning

- Best time to do exercise
- Fat burning hormones are more elevated
- Exercise will become a habit easier

This month, try...

- 10 minutes of exercise as soon as you wake up
- Visualization - imagine your ideal sport
- This will become a habit very quickly
- You'll get enormous benefits

Action Steps

- Do afternoon Get Thin Or Get Eaten visualization
- Try 10 minutes of Get Thin Or Get Eaten exercises 2-3 times per week

Ongoing Steps

- Speak with your Gabriel Method coach
- Do evening visualization each night before bed
- Do morning visualization suggested by coach
- Take morning probiotic supplement
- Continue frequent water consumption
- Take morning Gabriel Method greens
- Eat a great Gabriel Method blood sugar balancing breakfast
- Have Gabriel Method greens or blood sugar balancing snack in afternoon
